

- ▶ ROUSSANKA LOUKANOVA, *Generalization of Abstract Syntax in the Grammatical Framework GF*.

The paper introduces a possibility for expressing further linguistic generalizations by abstract syntax in GF. It uses GF to give a new perspective of abstract syntax with inspiration from universal grammar. The first part of the paper represents generalized syntactic categories and phrases across parts of speech by using categories and types that are dependent on parts of speech. The last part of the paper is an overview of some motivations for generalized abstract constructs.
