Cappable degrees - Some facts

Theorem (Ambos-Spies, Jockusch, Shore and Soare, 1984) For a c.e. degree **a**, the following are equivalent:

- **a** is noncappable;
- a is low-cuppable;
- **a** is promptly simple.

The cappable degrees form an ideal of \mathcal{R} , denoted as M, and hence we can consider the quotient structure \mathcal{R}/M , and consider Shoenfield conjecture in this structure.

Every nonzero c.e. degree bounds a cappable degree. (Exercise)

Locally noncappable degrees

Definition (Seetapun)

A c.e. degree **a** is locally noncappable if there is a c.e. degree $\mathbf{c} > \mathbf{a}$ such that no c.e. degree below \mathbf{c} can form a minimal pair with \mathbf{a} .

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Observation: If **a** is locally noncappable witnessed by $\mathbf{c} > \mathbf{a}$, and **a** bounding no minimal pairs, then **c** also bounds no minimal pairs.

Locally noncappable degrees

Definition (Seetapun)

A c.e. degree **a** is locally noncappable if there is a c.e. degree $\mathbf{c} > \mathbf{a}$ such that no c.e. degree below \mathbf{c} can form a minimal pair with \mathbf{a} .

Observation: If **a** is locally noncappable witnessed by $\mathbf{c} > \mathbf{a}$, and **a** bounding no minimal pairs, then **c** also bounds no minimal pairs.

To see this, let **d**, **e** be any two nonzero c.e. degrees below **c**, forming a minimal pair. Then there are nonzero c.e. degrees $\mathbf{f} < \mathbf{a}, \mathbf{d}$ and $\mathbf{g} < \mathbf{a}, \mathbf{e}$, and **f** and **g** form a minimal pair, contradicting the assumption that **a** bounds no minimal pairs.

Theorem (Seetapun)

Each nonzero c.e. degree **a** is locally noncappable. So there are no maximal nonbound degrees.

Highness and Nonboundings

Observation: If **a** is locally noncappable witnessed by $\mathbf{c} > \mathbf{a}$, and **a** is a pluscupping degree (bounds no nonzero noncuppable degrees), then **c** is also pluscupping. Therefore, by Seetapun's result, there are no maximal pluscupping degrees.

▶ (Downey, Lempp and Shore) Nonbounding degrees can be high₂.

• (Li) Plus-cupping degrees can be high₂.

But they cannot be high.

Theorem (Stephan and Wu)

c is Seetapun's result can be high₂.

This result is fairly strong, as it implies those results mentioned above immediately.

Theorem (Fang, Wang and Wu)

For any nonzero c.e. degree \mathbf{a} , there are c.e. degrees \mathbf{c}, \mathbf{e} above \mathbf{a} witnessing that \mathbf{a} is locally noncappable and the $\mathbf{c} \vee \mathbf{e}$ is high.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

A hierarchy of cuppable degrees

 LC_n denotes a subclass of cuppable degrees, each of which can be cupped to $\mathbf{0}'$ by a low_n degree. So LC_1 is exactly the class of noncappable degrees, and

$$LC_1 \subseteq LC_2 \subseteq \cdots \subseteq LC_n \subseteq \cdots \subseteq CUP.$$

Theorem (Li, Wu and Zhang)

$$LC_1 \subset LC_2.$$

Idea: construct a cappable and also low₂-cuppable degree.

CUP is bigger

Theorem (Greenberg, Ng and Wu)

$$\bigcup_n LC_n \subset CUP.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Requirements:

► A cuppable;

• If $A \oplus V$ computes K, then V is high.

Make A cuppable

Construct c.e. sets E, F and a p.c. functional Γ such that

$$K = \Gamma^{A,E}$$

and *E* incomplete:

$$F \neq \Phi^E$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

for any p.c. functional Φ .

Note the part of putting numbers into A.

Making A only high-cuppable

We construct a c.e. set P such that

 $\mathcal{Q}_e: P = \Phi_e^{A, V_e} \Rightarrow$ there is a p.c. functional Δ_e such that $TOT(i) = \lim_x \Delta_e^{V_e}(i, x)$

for each *i*.

Idea of satisfying Q_e : for each *i*, we try to satisfy the substrategy

 $\mathcal{T}_{e,i}: TOT(i) = \lim_{x} \Delta_{e}^{V_{e}}(i, x).$

Choose a high noncuppable degree \mathbf{h} , and consider $\mathbf{a} \lor \mathbf{h}$.

- high and only-high-cuppable.
- bounds noncuppable degrees.

Is it possible to have a plus-cupping and also only-high cuppable, degree?

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Main Result

Theorem (Wang and Wu)

These exists a pluscupping degree which is also only-high-cuppable.

It refutes a claim of Li and W. Wang:

Let PC_n be the collection of pluscupping degrees, such that all the nonzero degrees below them are low_n-cuppable.

•
$$PC_n = \emptyset;$$

- $PC_1 \subseteq PC_2$;
- ► Li and W. Wang's claim: PC₃ = PC, which is not true by our theorem.

Thanks!
